

[Learn About Stormwater Management](#)

Being proactive, homeowners can protect themselves and their property from flooding - which is typically the biggest problem associated with storms.

The time to prepare is before the storm and then to perform periodic maintenance to keep stormwater flowing off your property and into the stormwater drainage system.

Prepare by:

- Keeping debris out of the storm drain and ditches
- Report clogged ditches and culverts
- Cleaning out gutters and extending downspouts
- Removing all yard items/debris from obstructing storm drains and ditches
